 Recommendations from the UNC Board of Governors Subcommittee on Teacher and School Leader Quality

Preparing more, higher quality teachers and school leaders for North Carolina’s public schools is one of the University of North Carolina’s highest priorities and is central to the mission of the University. The UNC Board of Governors Subcommittee on Teacher and School Leader Quality makes the following recommendations in order to strengthen, focus, and redesign if necessary UNC’s educator preparation programs in order to produce a world-class educator workforce for North Carolina.

Over the past year the Subcommittee has met with the education deans of UNC’s fifteen Schools Education, faculty, public school personnel administrators, superintendents, legislators, policy-makers and others to better understand improvements that are needed, and the complexity and challenge involved with identified changes. While there are no simple answers to strengthening and improving our programs, it is clear that collaboration and communication between UNC Schools of Education and PK-12 schools is essential to our future success.

The UNC Board of Governors places a premium on teacher and principal preparation and seeks to advance this priority in the UNC System through the Office of University-School Programs at UNC General Administration overseeing PK-16 initiatives throughout the University. The Board seeks to further elevate this priority and fulfill its commitment through the following key recommendations:

1. Ensure greater public accountability through development of a UNC teacher quality dashboard to monitor and measure the performance of UNC’s fifteen nationally accredited teacher education programs. The dashboard will serve as an interactive, web-based tool used for analyzing and displaying data about UNC teacher preparation programs. It will contain performance indicators and other information at the system and campus level across a range of factors including recruitment, selection, preparation, employment, and induction. Indicators will include the impact of teacher preparation program graduates on PK-12 student learning, measures associated with national accreditation, and other outcome-based indicators from the University’s teacher quality research efforts.

Note: SAS has agreed to work with Dr. Alisa Chapman, Vice President of Academic Programs at UNC General Administration, to accomplish the goal outlined in this recommendation.

2. Create a structure for better assuring effective communication and collaboration about educator preparation among UNC Colleges of Education and Arts & Sciences as a shared responsibility across the University. Cooperation among the content fields in disciplinary departments and education programs should drive constant improvement and innovation while also securing consistent excellence and institutional efficiencies. To do so the collaboration must be goals driven and outcomes oriented, so that progress can be measured and so that institutions can be accountable for results.
3. Strengthen and align partnerships between colleges of education and PK-12 schools to achieve meaningful and mutually beneficial collaboration. Formal partnership agreements should align with statewide priorities, address regional supply and demand, use research and evidence-based practices aimed at PK-16 student success and program improvement, create and implement innovative models to support clinical preparation and placement needs, and offer support for beginning teachers that is focused on teaching quality and retention while ensuring that all new teachers are supported, monitored, and mentored in their first three years of service.

4. Improve teacher preparation by taking the following actions:
   - Expand high-quality, clinical practice as a core, year-long job-embedded experience in UNC teacher preparation programs so that candidates develop the knowledge base and skills necessary to meet the needs of students. The expansion should meet or exceed the Council for the Accreditation of Education Preparation (CAEP) standards by addressing partnerships for clinical preparation, clinical educators, and clinical experience. This work should be conducted collaboratively with PK-16 educators (at both public schools and UNC institutions) to better ensure consistency and alignment with standards and expectations. The UNC Board of Governors will work with the General Assembly and Governor’s Office to obtain the resources needed to implement and facilitate this work.
   
   - Use research-based evidence to guide measurable improvement in teacher preparation programs and to better align with programs, standards and best practices across the University. This work will be facilitated by UNC General Administration and the UNC Council of Education Deans.

   - Link candidate performance with valid and reliable performance assessments that are data- and evidenced-based. We believe this can be accomplished by adopting the Ed Teacher Performance Assessment (edTPA) as a system-wide best practice and expanding the current UNC pilot initiative. EdTPA is a rigorously developed and widely accepted tool used for performance assessment to inform teacher candidates and programs. UNC’s edTPA pilot is helping participating institutions 1) generate accurate and useful feedback to guide improvement of student teachers’ performance over time; 2) accurately predict their later on-the-job performance, as measured by academic, value-added measures; 3) provide a basis for faculty to make improvements in teacher-education programs; and 4) contribute to decisions on the preparation, development and recommendation of student teachers for licensure. For institutions seeking an alternative to edTPA, options may be considered for other instruments that link performance with valid and reliable performance assessments. The UNC Board of Governors will work with the General Assembly to obtain the resources needed to implement and facilitate this work at scale.

5. Improve the selection process and criteria for entry into principal preparation programs and scale best practices in evidence-based models for school leadership preparation and development. It is crucial for North Carolina to select and prepare high quality leaders for our P12 students, and
provide the regular support, development, and evaluation of school leaders that enables them to establish and maintain student success. UNC school leadership preparation programs will use research-based evidence to guide improvements in both selection and preparation of principals and other school-based leaders prepared for NC public schools.

6. **Strengthen recruitment and selection criteria for prospective teacher candidates** seeking to enter UNC preparation programs by taking the following actions:

   ■ **Establish a public-private teacher scholarship program** that is merit-based and targeted to attract the very best prospective candidates who are preparing to teach in North Carolina’s highest need licensure areas (science, mathematics, special education and middle grades), as well as in high-need districts and schools across the state. The UNC Board of Governors will work with the General Assembly and Governor’s Office to seek funding to establish this scholarship program.

   ■ **Support re-establishing a pay differential for NC public school teachers with advanced degrees who are teaching in high need subject areas and in high-need schools.** The UNC Board of Governors will work with the General Assembly, Governor’s Office, and the State Board of Education in support of the necessary legislative and policy changes.

   ■ **Develop campus-based recruitment plans that reflect current market research and regional school district needs** to ensure that UNC campuses are individually and collectively responding to the state’s need for high-quality teachers and school leaders. The recruitment plans should be linked to projections of enrollment growth for individual education programs and focused on increasing the supply of new, initially licensed teachers. Plans should place an emphasis on North Carolina’s highest need licensure areas: science, mathematics, special education, and middle grades. All UNC teacher education programs will be held accountable to this expectation.

7. **Improve support for early-career teachers by adopting and expanding statewide the North Carolina New Teacher Support Program (NC NTSP),** an induction program that supports beginning teachers in their first three years of service. Recently funded by the North Carolina General Assembly in the 2014 legislative short session, this program has had early success reducing teacher-quality gaps in North Carolina by focusing on the retention of teachers in high-need schools and ensuring that teachers who remain in the profession produce substantive student-achievement gains. In keeping with the resources outlined for this initiative in the UNC Board of Governors’ strategic plan, the Board will work with the General Assembly and Governor’s Office to obtain the resources needed to implement and facilitate this work. In addition to increased state support, statewide expansion will require a shared business model with participating school systems to facilitate replication.
